

ABOUT US

The Mission of the Great Lakes Trenchless Association is to enhance the skills and credibility of all trenchless contractors and underground construction professionals, develop and exchange industry knowledge, and to promote trenchless methods and underground construction and the understanding of its benefits.

This association was developed for the interest of directional drillers and those in support of their interests. The GLTA was then formed to meet the needs of the growing trenchless industry. More and more issues were being placed on the industry with no recourse. Now with force in numbers a forum is in place to tackle the problems that arise.

Do you want to become a leader in the Trenchless Industry? Become a member of the Great Lakes Trenchless Association TODAY!

- **Engineers and contractors combining their knowledge to further the Trenchless Industry**
